

Level 1_ S2

WORKFORCE OF THE FUTURE

1) Speaking :

What are the advantages and the disadvantages of full automation ?

2) Listening :

Changing Precision Technology Co.'s cellphone factory in China 90% of its workers with machines and saw productivity while the number of product defects This is great news for the company, not so great news for the workers. Because free-market capitalism toward innovation and efficiency, this is a phenomenon that will be repeated in small steps and in every industrialized society. A White House report released in December says 83% of U.S. jobs in which people make less than \$20 per hour are now, or soon will be, Additionally, thanks to..... of driverless vehicles, all the underemployed folks who have found a slot driving for Uber and Lyft may soon find Andrew Yang, founder and chief executive of Venture for America, published an article this month that cites the White House report and warns Americans to get ready 60% unemployment. Having surveyed the thinking of top innovators in Silicon Valley, Yang says, 'Literally the smartest people in the world think an of job destruction is coming with the development of artificial intelligence, robotics, software and automation.

Questions

- Listen and complete the paragraph.
- pick up the percentages/rates mentioned in the extract then find out what they refer to.

3) Reading:

(1) Digital technology brings efficiencies but it also brings disruption and radically new ways of engaging and doing business. For countries like South Africa that are less prepared, digital may bring more job losses than gains. Statistics reveal that almost 5.7 million white - and blue-collar jobs are currently at risk of total automation with 35% of them in South Africa. The more predictable and repetitive the activities that make up the task, the more likely it is to be automated. The more intensive the use of human-like skills to perform a task, the less likely it is to be automated.

(2) However, to rise to this challenge, humans must learn to collaborate with machines to enhance their own productivity and ingenuity. South Africa will need to recalibrate its workforce for digital through education and training and this will determine **its** future trajectory. To understand the evolution of jobs and the skills shifts that will be required over the next five to 10 years, we have to anticipate the shift in the job of four people from South Africa.

(3) Today, Derek, aged 29, engages directly with customers to sell products and resolve queries, directs and coordinates sales activities and reviews operational reports to project sales and determine profitability. Tomorrow he should learn using analytical software to determine trends, predict sales and personalize customer engagement and shifts from managing people to managing problems.

(4) Fatima, aged 25, provides customers with information about products and services, enters orders, cancels accounts and deals with queries, and keeps records of customer interactions or transactions. In the next five years she will be using analytics and other tools to gain an insightful understanding of customer behaviors and needs, and match them to products and services

(5) Johannes, aged 46, sets up machines using blueprints, adjusts settings (speed, temperature), monitors and maintains machines for unusual sound or vibration. He inserts material into them and removes and tests finished products. Tomorrow co-bots and Johannes will work together to increase productivity. He will set up robotic machine workers with the appropriate settings, supervise robotic production process, supported by sensor data from the whole production line, and train, maintain and repair robots to ensure steady quality and productivity.

(6) Mapule, aged 42, prepares and maintains records related to employees' lifecycles, from hiring to termination; finds, hires, and engages with **them** on job responsibilities, work policies, learning; handles complaints and queries. Tomorrow, he will have learned to use applicant tracking software and information systems to streamline work processes; apply analytics to available company and external data to develop insights on hiring trends and to match available skills to tasks and projects.

Creating South Africa's Future Workforce, February, 1, 2018

Comprehension Questions:

1) Fill in the blanks with the right information from the text:

Digital technology represents afor countries like South Africa because its adoption puts lessblue and white-collar jobs at

2) Match the jobs with the appropriate names:

Name		Job	
1. Mapule		a. Customer service person	
2. Derek		b. Business practitioner	
3. Fatima		c. Programmer	
4. Johannes		d. Sales person	
		e. Machine operator	
1=.....	2=.....	3=.....	4=.....

3) Tick the accurate answer:

A. To solve the problem of digital technology's adaption, South Africa has to

- ☐ a. to reduce its workforce.
☐ b. to retrain its workforce.
☐ c. to double its workforce.

B. The underlined sentence in the text means

- ☐ a. Clerks, cashiers, and constructors will more likely be replaced by machines than teachers and negotiators.
☐ b. Teaching and negotiating with people are easier to automate than jobs as clerks, cashiers, and constructors.
☐ c. All jobs including Clerks, teachers, cashiers, tellers, negotiators, and constructors will equally be automated.

4) Answer the questions below:

a. What technology will be able to facilitate Mapule's job of matching available skills to tasks and projects?
.....

b. Whom should Johannes cooperate with in the future in order to boost productivity?
.....

c. How will Fatima keep her job in the future?
.....

5) Pick out synonyms from the text for these words:

- a. Diagnostic (§3):
b. Deep (§4):
c. Unchanging (§5):

6) What do the underlined words refer to in the text:

- a. its (§2):
b. them (§6):

4) Language:

Insert the parts of sentences back into the paragraph.

A WAVE of automation anxiety has hit the West. Just try typing "Will machines..." into Google. the sentence with differing degrees of disquiet: "...take my job?"; "...take all jobs?"; "...replace humans?"; "...take over the world?"

Job-grabbing robots In 2013 Carl Benedikt Frey and Michael Osborne of Oxford University used a machine-learning algorithm to 702 different kinds of job in America could be automated. They concluded that fully 47% could be "over the next decade or two".

A new working paper by the OECD, a club of mostly rich countries,, looking at other developed economies. Its technique differs from Mr Frey and Mr Osborne's study by assessing the automatability of each task within a given job, 2015. Overall, the study finds that 14% of jobs across 32 countries are, defined as having at least a 70% chance of automation. A further 32%, with a probability between 50% and 70%. At current employment rates, risk across the 32 countries in the study.

- a. employs a similar approach
b. are no longer science fiction
c. done by machines
d. based on a survey of skills in
e. An algorithm offers to complete
f. that puts 210m jobs at
g. assess how easily
h. were slightly less imperilled
i. highly vulnerable

Grammar review:

- We use the past simple for actions at a particular point in the past.
*In 2002, Mercedes **suffered** a dramatic fall.*
*Dieter Zetsche **became** Head of Mercedes in September 2005.*
- We use the present perfect for actions linking the present to a point in the past.
*Since 2005, Mercedes **has gone** from the worst-performing of the large luxury car makers to the trailblazer.*

A Which of the following expressions are used with the past simple and which are used with the present perfect? Which are used with both?

in 2010	since 2009	yet
this week	yesterday	ever
recently	last year	six months ago

B Complete this short business brief about Vietnam using the past simple or the present perfect forms of the verbs in brackets.

Vietnam¹ (go) through many changes in its history and² (experience) many economic changes recently. It is currently experiencing an economic boom. In 1986, the government³ (introduce) economic reforms or *doi moi* (*doi* meaning change and *moi* new). The reforms⁴ (permit) the setting up of free market enterprises and⁵ (abolish) the practice of collective farming. However, agriculture remains the most important part of the economy. Vietnam⁶ (recently/become) the second largest producer of rice in the world after Thailand. The industrial sector⁷ (show) dramatic improvement and expansion as well. In 1993, the World Bank⁸ (declare) 58% of the population to be living in poverty. By 2005, this figure was less than 20%. Vietnam⁹ (also/make) great strides on the international stage in the last decade or so. It¹⁰ (become) a full member of ASEAN in 1995, and of the WTO in 2006. The effects of this new-found prosperity can be seen everywhere. Large, glitzy malls¹¹ (appear) in major cities, while streets once filled with bicycles are now overflowing with locally produced Japanese, Korean and Chinese motorbikes and cars. Business visitors wishing to relax in a more traditional Vietnamese town should visit Hoi An. Hoi An¹² (be) a major Asian trading port in the 17th and 18th centuries, and its picturesque architecture and relaxed lifestyle¹³ (change) little over the years.

WRITING TASK:

Write a post in a blog where you express your opinion concerning automation at work.
